

Coffee & Lunch Break Timer

Save Time & Money!!

Track coffee and lunch breaks with the Interlude electronic countdown Timer.

If your company relies on a lunch truck to start your breaks....then who times how much time your employees actually take?

Breaks can now be timed to the minute, thereby reducing the amount of excess time taken by employees. This countdown timer will signal when break starts and again when break is finished. There is a large digital countdown display which displays time remaining on break, two selectable buttons located on the front display are programmed for the duration of a break and lunch, by depressing either button the timer will ring a bell or horn to signify start of break or lunch, at 1 minute left a short burst will sound and then at 00 a longer burst will occur signifying end of break or lunch.

Model IT-99 Timer

Optional 24 Volt AC bell can be supplied if your company requires a signal device, the bell is a 6 inch diameter, with a sound rating of 87 db and will operate directly from timer. We have various signal devices to choose from depending on the loudness level and size of your facility.
